

## Appendix C: Recruitment Flyer

# Research Participants Needed

You are invited to participate in a research study about how osteoporosis impacts a person's daily life.

Professors and Graduate Physical Therapy students from the Physical Therapy Program at Daemen College are conducting a research study entitled "The Lived Experience of Osteoporosis".

The purpose of this study is to gain a better understanding of what individuals who are living with osteoporosis experience in their daily life. The information we gather from this study will help physical therapists to be more aware of the issues that influence people living with osteoporosis.

We are looking for individuals over the age of 18 who have been living with a diagnosis of osteoporosis for at least one year and are willing to be interviewed about their life. The interview would be approximately 30 to 45 minutes in length and you would be asked questions like: How would you describe a typical day now that you have been diagnosed with Osteoporosis? Are there any activities that you were once able to do that you are unable to participate or had to modify due to being diagnosed with osteoporosis? The interviews will be conducted in a private conference room on the Daemen college campus in Amherst, NY.

If you are interested in participating in the study or would like more information about the study you can contact Dr. Theresa Kolodziej who is a faculty member Daemen College in the Physical therapy program, at 716- 839- 8412 or via email: [tkolodzi@daemen.edu](mailto:tkolodzi@daemen.edu)

Sincerely,  
Dr. Theresa Kolodziej
